- ☐ GRAY SCALE DOCUMENTS
- ☐ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.

BEST AVAILABLE COPY

IN THE CLAIMS:

Kindly replace the claims with the following:

1. (Previously Amended) A method of generating a medical report,
comprising:

displaying a plurality of pre-chosen findings comprising a plurality of medical conditions that are associated with a particular portion or sub-portion or a living body, and a separate medical report simultaneously on an electronic display, the medical report comprising a summary section;

selecting a pre-chosen finding based on a diagnosis of the particular portion or sub-portion of the body as a user selected finding; and

automatically copying electronically said user-selected finding from the displayed pre-chosen findings into the summary section of the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.

2. (Original) A method as recited in claim 1, wherein the medical report further comprises a plurality of group sections, and

automatically copying electronically each pre-chosen finding into a group section of the plurality of group sections which corresponds to the pre-chosen finding upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report..

3. (Previously presented) A method as recited in claim 1, further comprising:

receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selection of said respective pre-chosen finding being previously selected and copied in the summary section of the medical report; and

automatically removing electronically the second selected respective pre-chosen finding from the summary section of the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report..

4. (cancelled)

5. (Previously presented) A method as recited in claim 1, further comprising displaying on the electronic display an indicator next to the selected pre-chosen finding, separate from the medical report.

6. (Previously presented) A method as recited in claim 5, further comprising:

receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the medical report;

automatically removing electronically the second selected respective pre-chosen finding in the summary section of the medical report; and

automatically removing electronically the indicator next to the second selected respective pre-chosen finding.

7. (Original) A method as recited in claim 1, wherein the copying further comprises converting the selected pre-chosen finding into a more descriptive form before copying into the summary section.

8. (Previously Amended) A method comprising:

displaying a list of predetermined findings and a medical report simultaneously on an electronic display; and

when a respective predetermined finding is electronically selected by a user from the list, automatically electronically copying said respective predetermined finding into the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.

9. (Previously Amended) A computer readable storage medium storing a computer program instructing a computer to perform a method of generating a medical report, the method comprising:

displaying pre-chosen findings comprising a plurality of medical conditions that are associated with a particular portion or sub-portion of a living body, and a separate medical report simultaneously on an electronic display, the medical report comprising a summary section;

selecting a pre-chosen finding based on a diagnosis of the particular portion or sub-portion of the body as a user selected finding; and

automatically copying electronically a respective pre-chosen finding and a user-selected finding from the pre-chosen findings into the summary section of the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.

10. (Original) A computer readable storage medium as recited in claim 9,

wherein the medical report further comprises a plurality of group sections, and automatically copying electronically each pre-chosen finding into a group section of the plurality of group sections which corresponds to the pre-chosen finding.

11. (Previously amended) A computer readable storage medium as recited in claim 9, further comprising:

receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the summary section of the medical report; and

automatically removing electronically the second selected respective pre-chosen finding from the summary section of the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.

12. (Original) A computer readable storage medium as recited in claim 9, further comprising selecting the pre-chosen findings from a list of available findings.

13. (Previously presented) A computer readable storage medium as recited in claim 9, further comprising displaying on the electronic display an indicator next to the selected pre-chosen finding, separate from the medical report, so that specific information regarding the patient can be identified either from the display of the pre-chosen findings and identified in further detail in the medical report.

14. (Previously presented) A computer readable storage medium as recited in claim 13, further comprising:

receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the medical report;

automatically removing electronically the second selected respective pre-chosen finding in the summary section of the report; and

automatically removing electronically the indicator next to the second selected respective pre-chosen finding.

15. (Original) A computer readable storage medium as recited in claim 9, wherein the copying further comprises converting the selected pre-chosen finding into a more descriptive form before copying in to the summary section.

16. (Currently Amended) A computer readable storage medium storing a computer program instructing a computer to perform a method of generating a medical report, the method comprising:

displaying a list of predetermined findings and a medical report simultaneously on an electronic display, the medical report comprising a summary section; and

when a respective predetermined finding is electronically selected by a user from the list, automatically electronically copying said respective predetermined finding into a summary selection of the medical report.

17. (Previously Amended) An apparatus comprising:

means for displaying a list of predetermined findings and a medical report simultaneously on an electronic display, the medical report comprising a summary section; and

when a respective predetermined finding is electronically selected by a user from the list, means for automatically electronically copying said respective predetermined finding into the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.

18. (Previously Amended) An apparatus comprising:

a display unit displaying pre-chosen findings comprising a plurality of medical conditions that are associated with a particular portion or sub-portion of a living body, and a separate medical report simultaneously on an electronic display, the medical report comprising a summary section; and

a processing unit for automatically copying a respective pre-chosen finding and a user-selected finding from the pre-chosen findings into the summary section of the medical report upon an indication by a user that it is desired that said user-selected finding be added to the summary section of the medical report.
